

# Toward a Globally Acknowledged and Free HPC Certification

Julian Kunkel (+ HPC Certification Forum)

<https://hpc-certification.org>

HPCCF Virtual Workshop

2020-05-20

## Goals

- Establish globally acknowledged HPC certification
  - ▶ Discuss opportunities and roadmap, foster collaboration

## Agenda

- Introduction to the HPC Certification Forum (20 min)
- Invited speakers (10 min each)
- Examination and certification (20 min)
- Discussion

## Interactivity

- Q&A time slot after each talk
- Please feel free to ask questions ASAP in the chat
- Critical discussions are welcome!

# Outline

- Not all users possess the right level of training
  - ▶ Inefficient usage of systems, frustration, lost potential
  - ▶ Good training saves compute time and costs!
- Diverse user background and goals
  - ▶ Science is the goal, HPC is the vehicle
  - ▶ Need to run an application to complete the PhD
- Learning is not easy
  - ▶ Users need to understand beneficial knowledge for tasks
  - ▶ There exist various different training material
  - ▶ Teaching of different data centers is hard to compare
- Data center have difficulties to verify the skills of users

## Goals

- Fine-grained standardizing HPC knowledge representation
  - ▶ What competences exist, how are they defined?
  - ▶ Puzzle of competences for everyone (practitioners, students, admins)
  - ▶ Supporting navigation and role-specific knowledge maps
- Establishing international certificates attesting knowledge
- Supporting an ecosystem around the HPC competences

## Scope of the forum

- Central authority for competence representation, certification, and support
- Purposeful limitations of the forum:
  - ▶ We do not compete with content providers
  - ▶ We do not create a curriculum (university/centers responsibility)

## Organization Details

- An independent international body
- Organized into
  - ▶ Steering board (elected)
  - ▶ Full members (with voting rights)
    - Contributors to the project (e.g., 1-2 hours per month)
  - ▶ Associate members (anyone and any institution)
  - ▶ Collaboration with e.g., SIGHPC Education Chapter

## Responsibilities

- Curating and maintaining the skill tree and certificates
- Providing tools and ecosystem around the competences

## Mandate and Election

- Steering board is elected for one year (period of activity)
- Period June – June
- Take over of new steering board during general assembly at ISC HPC

## Current election

- We will soon start with the voting for next year's period
- Join our Slack channel and election channel if you are interested

We have governance rules splitting responsibility across roles

## Steering Board

- General chair: Julian Kunkel (University of Reading)
- Skill-tree curator: Kai Himstedt (University of Hamburg)
- Topic curators:
  - ▶ HPC Knowledge: Lev Lafayette (University of Melbourne)
  - ▶ Performance Engineering: Anja Gerbes (University of Frankfurt)
  - ▶ Use of the HPC Environment: (Jean-Thomas Acquaviva) (DDN)
  - ▶ Software Development: Waseem Kamleh (University of Adelaide)
  - ▶ Administration: Sharan Kalwani (DataSwing)
  - ▶ Big Data Analytics: Cristiana Dinea (NVIDIA)
- Examination curator: Christian Meesters (University of Mainz)
- Publicity chair: Weronika Filingner

## Organization of the members

- Webpage is the central hub (<https://www.hpc-certification.org>)
- Mailinglists (news, members, board)
- Monthly public meetings on our Slack channel
- Annual general assembly (form of a BoF at ISC or workshop)

## Data handling

- Everything\* is developed/available in the open  
GitHub (<https://github.com/HPC-certification-forum>)
- Exception are examination questions (later talk)

# Outline

# Classification of Competences == Skills

- A **skill** defines background, objectives, learning outcomes
- The **skill tree** organizes the competences as hierarchical skills
- Certificates bundle several skills into attestable unit

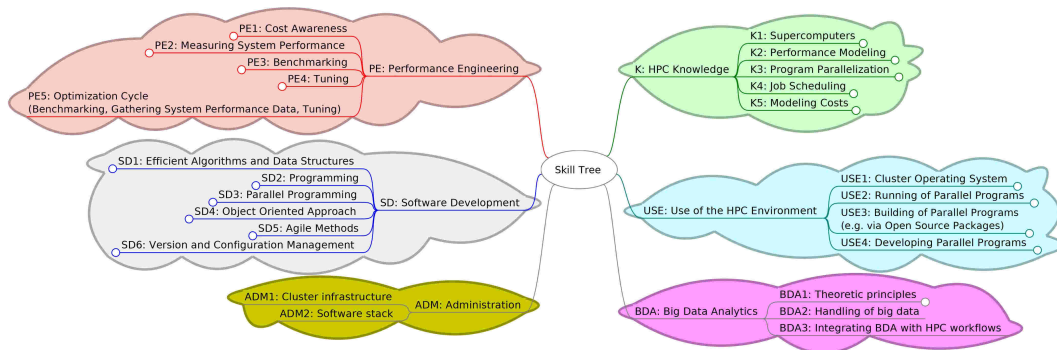

Figure: Top-levels of the skill tree (Initial ADM and BDA branches)

## Example High-Level Skill (Excerpt)

- Name: SLURM Workload manager
- Id: USE4.2.2-B
- Background: SLURM is a widely used open-source workload manager providing various advanced features.
- Aim:
  - ▶ comprehend and describe the basic architecture of SLURM and its tools
  - ▶ use relevant tools to run and monitor (parallel) applications

### Learning outcomes (these must be examinable)

- run interactive jobs with salloc, a batch job with sbatch
- explain the architecture of SLURM, i.e., the role of slurmd, srun
- explain the function of the tools: sacct, sbatch, salloc, ...
- explain time limits and the benefit of a backfill scheduler
- see <https://www.hpc-certification.org/wiki/>

- Granularity of skill descriptions
  - ▶ Too fine  $\Rightarrow$  content of a skill is predefined at leaf level
  - ▶ Too coarse  $\Rightarrow$  no help for structuring the material
  - ▶ Guiding principle: leaf node should be coverable in 1-4 hour lecture/workshop
- Organization of HPC skills
  - ▶ Skills are typically depending on sub-skills  $\Rightarrow$  tree structure
  - ▶ References to skills are possible; still skills are building blocks for various tasks
  - ▶ One skill can have multiple instances for different skill levels (basic, ..., expert)
- Verification of skill tree and certification approach
  - ▶ Feedback by the HPC community/practitioners justify the approaches

## ■ Certificate definition

- ▶ Bundles a set of useful skills together
- ▶ A users' HPC qualification is certified by successful exams
- ▶ Testing a single (fine-grained) skill may be too easy with a cheat sheet

## ■ Separation of **skill**, **certificates** and **content provider**

- ▶ Similar to the concept of a high school graduation exam
- ▶ Learning material can be provided by different institutions
- ▶ Teachers can put badges on material: this "trains skills X, Y, Z"

## ■ External information can be linked to the skills providing different **views**

- ▶ Suitability for a user role (Tester, Builder, Developer)
- ▶ Suitability for a scientific domain (Chemistry, Physics, ...)
- ▶ View: purpose-specific representation / coloring / content
  - Groups/institutions can derive a new skill tree with their own emphasis
  - What should people know to effectively work in your environment?

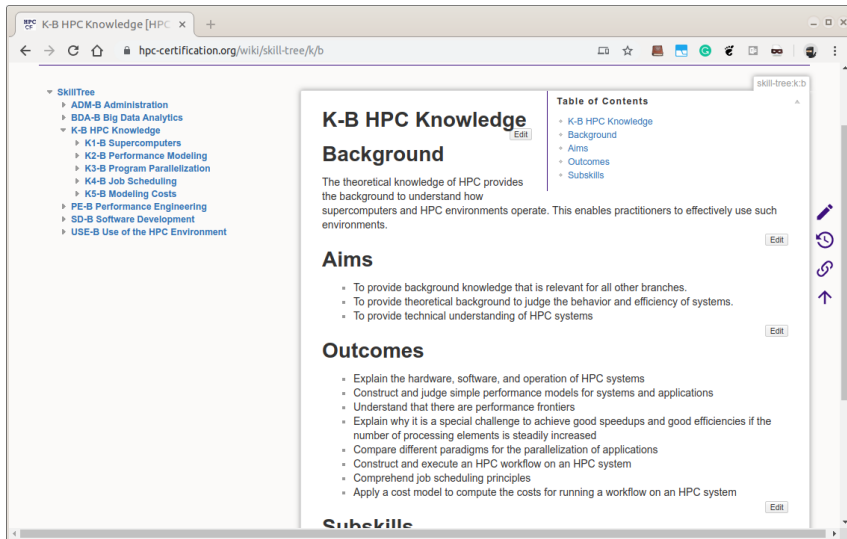

# Status / Previous Activities

- Released a version of the skill tree (v0.5)
- Released technical representations of the HPC skills
  - ▶ XML and Markdown versions (embedded on a Wiki)
- Released JavaScript for visualization of skill tree ([demo](#))
  - ▶ Enables views: adjustable/embeddable in your webpage
- Developed prototype for exam process and framework
- Developed a tree-versioning strategy
- Designed seal of endorsement
- Engaged with various stakeholders (e.g., SIGHPC Edu)
- Conducted survey to verify the skill tree (more to come!)

*All our developments are under open licenses (except the exam questions)*

This training covers (partially)  
- K1.1 System architectures  
- K1.2 Hardware architectures  
See <https://hpc-certification.org/c/1.0>

The screenshot shows a web browser window with the URL `hpc-certification.org/wiki/skill-tree/k/b`. The page is titled "K-B HPC Knowledge Background" and is part of a "SkillTree" navigation system. The left sidebar lists various skill categories, including "K-B HPC Knowledge" which is expanded to show sub-items like "K1-B Supercomputers", "K2-B Performance Modeling", "K3-B Program Parallelization", "K4-B Job Scheduling", and "K5-B Modeling Costs". The main content area is divided into sections: "Background", "Aims", "Outcomes", and "Subskills". The "Background" section contains a paragraph about the theoretical knowledge of HPC. The "Aims" section lists three bullet points. The "Outcomes" section lists eight bullet points. The "Subskills" section is partially visible at the bottom. A "Table of Contents" sidebar on the right lists the main sections and sub-items. The page includes "Edit" buttons for each section and a vertical toolbar on the right with icons for editing, history, and linking.

**K-B HPC Knowledge**

**Background**

The theoretical knowledge of HPC provides the background to understand how supercomputers and HPC environments operate. This enables practitioners to effectively use such environments.

**Aims**

- To provide background knowledge that is relevant for all other branches.
- To provide theoretical background to judge the behavior and efficiency of systems.
- To provide technical understanding of HPC systems

**Outcomes**

- Explain the hardware, software, and operation of HPC systems
- Construct and judge simple performance models for systems and applications
- Understand that there are performance frontiers
- Explain why it is a special challenge to achieve good speedups and good efficiencies if the number of processing elements is steadily increased
- Compare different paradigms for the parallelization of applications
- Construct and execute an HPC workflow on an HPC system
- Comprehend job scheduling principles
- Apply a cost model to compute the costs for running a workflow on an HPC system

**Subskills**

## How can members contribute?

- Webpage with Markdown version controlled in Git
  - ▶ <https://www.hpc-certification.org/wiki/skill-tree/b>
  - ▶ GitHub: <https://github.com/HPC-certification-forum/skill-tree>
    - Pull requests, reviews, comments, ...
- Editing a MindMap, the structure of Skills
  - ▶ Synchronized with the skill tree in Git
  - ▶ Uses the OpenSource tool Freemind
- Discussion on our **Slack**

# Outline

# Outlook and Expected Benefits

## HPC practitioners

- Increase motivation to participate as the certificates are recognized in a CV
- Validate knowledge via tests
- Browse relevant competences
- Identify recommended and required skills related to certain tasks
- Understand and compare teaching offers across sites

## Data centers

- Increase sharing of teaching materials
- Simplifies documentation of taught skills
- Identify missing teaching activities
- Tailor skill-representation specifically to users
- Correlate lack of skills with efficient use

## HPC Certification Program

- Effort to standardize representation/certification of relevant HPC skills
  - ▶ Hierarchical definition of skills for practitioners
  - ▶ Building blocks that can be cherry-picked for different tasks
  - ▶ It's goal is **NOT** to provide content or a linear curriculum
- Perspective for data centers
  - ▶ Use statistics and machine learning to direct users to right skills
  - ▶ Make certain skills a mandatory requirement?
- Customizable representation and navigation for data centers/domains
  - ▶ Interactive viewer to browse skills and related content
  - ▶ We will use the viewer to link good content to the skills, too!
- Visit us and join our Slack/ mailing lists: <https://hpc-certification.org>
