Julian Kunkel, Anja Gerbes, Weronika Filinger, Marc-Andre Hermanns

The HPC Certification Forum in 2022

BoF Agenda

- Introduction of the HPC Certification Program
  Julian Kunkel
- Station organization based on the Example: Software Development Subtree
  Marc-Andre Hermanns
- **All participants**: Independent work across stations
- Wrap up - General (+ Panel) discussion

Outline

The **HPC** **Certification Forum**

Goals

- Fine-grained HPC knowledge representation ⇒ Competence Standard
    - ▶ What competences exist, how are they defined?
    - ▶ Puzzle of competences for everyone (practitioners, students, admins)
    - ▶ Supporting navigation and role-specific knowledge maps
- Establishing international certificates attesting knowledge
- Supporting an ecosystem around the HPC competences

Scope of the forum

- Central authority for competence representation, certification, and support
- Purposeful limitations of the forum:
    - ▶ We do not compete with content providers
    - ▶ We do not create a curriculum (university/centers responsibility)

The **HPC Certification Forum**

Organization Details

- An independent international body
- Organized into
    - ▶ Steering board (elected)
    - ▶ Full members (with voting rights) - Contributors
    - ▶ Associate members (anyone and any institution)
    - ▶ Collaboration with e.g., SIGHPC Education Chapter

Activities

- Curating and maintaining the **Competence Standard**
- Providing tools and ecosystem around the competences

Governance

Various processes are documented here.

Steering Board

- General chair: Julian Kunkel (University of Göttingen / GWDG)
- Skill-tree curator: Kai Himstedt (University of Hamburg)
- Topic curators:
  - HPC Knowledge: Lev Lafayette (University of Melbourne)
  - Performance Engineering: Anja Gerbes (University of Dresden)
  - Sofware Development: Marc-Andre Hermanns (RWTH Aachen)
  - Administration: Sudeep Narayan Banerjee (Indian Institute of Technology Gandhinagar)
- Publicity chair: Weronika Filinger
- Other topics are jointly managed by the board

Organization

Organization of the members

- Webpage is the central hub (https://www.hpc-certification.org)
- Mailinglists (news, members, board)
- Monthly public meetings on our Slack channel
- Monthly meeting of the board
- Annual general assembly (BoF at ISC or independent workshop)

Data handling

- Everything* is developed/available in the open
  GitHub (https://github.com/HPC-certification-forum)
- Exception are examination questions

Outline

Classification of Competences == Skills

- A **skill** defines background, objectives, learning outcomes
- The **skill tree** organizes the competences as hierarchical skills
- Certificates bundle several skills into attestable unit
Figure: Top-levels of the skill tree (Initial ADM and BDA branches)

Example High-Level Skill (Excerpt)

- Name: Command Line Interface
- Id: USE1.1-B
- Background: HPC systems are usually accessed via a Linux-based Command Line Interface (CLI) that is provided by a shell. At its core, a shell is ...
- Aim:
    - describe the key principles of a shell
    - execute basic programs to query system information and manipulate...

Learning outcomes (these must be examinable)

- Utilize the bash shell to execute individual programs with arguments
- Describe the meaning of the exit code of a program
- Run multiple programs after another depending on the exit code ;, &&, ||
- List the set of basic programs and their tasks:
    - pwd

Classification of HPC Competences

- Granularity of skill descriptions
  - Too fine $\Rightarrow$ content of a skill is predefined at leaf level
  - Too coarse $\Rightarrow$ no help for structuring the material
  - Guiding principle: leaf node should be covered in 1-4 hour lecture/workshop
- Organization of HPC skills
  - Skills are typically depending on sub-skills $\Rightarrow$ tree structure
  - References to skills are possible; still skills are building blocks for various tasks
  - One skill can have multiple instances for different skill levels (basic, ..., expert)
- Verification of skill tree and certification approach
  - Feedback by the HPC community/practitioners justify the approaches

Status / Previous Activities

- Development version of the Competence Standard is online
  - ▶ Git managed Markdown files
  - ▶ Files are also available in a Wiki (for interaction)
- Developed various processes

- Supporting experts to adopt skills
  - ▶ Enable experts to curate skills that are in their field of expertise
  - ▶ Similar to code maintainer - various contributions this year
- Working on sponsoring
- Developed first (but limited exam!)

All our developments are under open licenses (except the exam questions)

HPC CF
Endorsed
Training
1.0

This training covers (partially)
- K1.1 System architectures
- K1.2 Hardware architectures
See https//hpc-certification.org/c/1.0

Wiki for Skills

Contribution to the Skill-Tree High-Level Editing

How can members contribute?

- Webpage with Markdown version controlled in Git
  - ▶ https://www.hpc-certification.org/wiki/skill-tree/b
  - ▶ GitHub: https://github.com/HPC-certification-forum/skill-tree
    - Pull requests, reviews, comments, …
- Editing a MindMap, the structure of Skills
  - ▶ Synchronized with the skill tree in Git
  - ▶ Uses the OpenSource tool Freemind
- Discussion on our Slack
- Documented in our processes section
- See our videos on YouTube

Outline

Certification: Assessment

1. User registers to test, receives email
2. User takes test online (any time!), consists of
   - ▶ Scenario – SSH login in a browser to a Docker environment
   - ▶ Multiple choice exam
     - • System selects number of questions (and responses) randomly from a pool
3. Results are submitted to the web server
4. Automatic approval of response
5. Automatic creation of certificate and returned by email
   - ▶ Permanent computer-verifiable proof that skill is created
     - • Return a text version with GPG signature
     - • Return a link that can be verified on hpc-certification.org

■ Privacy: minimize information stored on servers, keep some for statistics

■ Includes some measure to prevent cheating and brute forcing (e.g., delay)

# Certification: Certificate

Text representation

Certificate

Outline

Summary

HPC Certification Program

- Effort to standardize representation/certification of relevant HPC skills
  - ▶ Hierarchical definition of skills for practitioners
  - ▶ Building blocks that can be cherry-picked for different tasks
  - ▶ It's goal is **NOT** to provide content or a linear curriculum
- Perspective for data centers
  - ▶ Use statistics and machine learning to direct users to right skills
  - ▶ Make certain skills a mandatory requirement?
- Customizable representation and navigation for data centers/domains
  - ▶ Interactive viewer to browse skills and related content
  - ▶ We will use the viewer to link good content to the skills, too!
- Visit us and join our Slack/mailing lists: https://hpc-certification.org

Appendix

Challenges for HPC (and Open Source) Training

- Not all users possess the right level of training
  - ▶ Inefficient usage of systems, frustration, lost potential
  - ▶ Good training saves compute time and costs!
- Diverse user background and goals
  - ▶ Science is the goal, HPC is the vehicle
  - ▶ Need to run an application to complete the PhD
- Learning is not easy
  - ▶ Users need to understand beneficial knowledge for tasks
  - ▶ There exist various different training material
  - ▶ Teaching of different data centers is hard to compare
- Data center have difficulties to verify the skills of users

Further Considerations

- Certificate definition
  - Bundles a set of useful skills together
  - A users' HPC qualification is certified by successful exams
  - Testing a single (fine-grained) skill may be too easy with a cheat sheet

- Separation of **skill**, **certificates** and **content provider**
  - Similar to the concept of a high school graduation exam
  - Learning material can be provided by different institutions
  - Teachers can put badges on material: this "trains skills X, Y, Z"

- External information can be linked to the skills providing different **views**
  - Suitability for a user role (Tester, Builder, Developer)
  - Suitability for a scientific domain (Chemistry, Physics, ...)
  - View: purpose-specific representation / coloring / content
    - Groups/institutions can derive a new skill tree with their own emphasis
    - What should people know to effectively work in your environment?

Outlook and Expected Benefits

HPC practitioners

- Increase motivation to participate as the certificates are recognized in a CV
- Validate knowledge via tests
- Browse relevant competences
- Identify recommended and required skills related to certain tasks
- Understand and compare teaching offers across sites

Data centers

- Increase sharing of teaching materials
- Simplifies documentation of taught skills
- Identify missing teaching activities
- Tailor skill-representation specifically to users
- Correlate lack of skills with efficient use
